An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Carroll on 10/12/2005.

The application has been amended as follows:

1. (Currently amended) A push pin device comprising:
a pin having a tip;
a grasping member, wherein said pin extends from said grasping member; and
an outer member coupled to and forming a loop around said pin, wherein said tip of said pin is retracted inside of said outer member when said outer member is uncompressed, and wherein said tip of said pin is extended outside of said outer member when said outer member is compressed, wherein said outer member includes a first portion coupled to said grasping member, a second portion opposite said first portion, and protruding portions extending outwardly from ~~in a direction towards a~~ substrate said second portion on each side of said second portion and in a direction towards a substrate to engage the substrate, and wherein said first portion of said outer member engages said second portion when said pin is extended into the substrate such

that said second portion of said outer member is deflected and applies an opposing force against said first portion.

12. (Currently amended) A push pin device comprising:

a pin having a tip; and

an outer member coupled to and forming a loop around said pin, wherein said pin extends from a first portion of said outer member toward a second portion of said outer member, and wherein said first portion of said outer member contacts said second portion of said outer member when said outer member is compressed such that said second portion is deflected and applies an opposing force against said first portion when said pin is extended into a substrate, wherein said outer member includes protruding portions extending outwardly from ~~in a direction towards the substrate~~ said second portion on each side of said second portion and in a direction towards the substrate to engage the substrate, and wherein said outer member includes hinge points at each side portion such that said outer member bends at said hinge points as said pin is compressed.
